

SAMUEL YENENEH

Computer Science | Artificial Intelligence | Research & Data Analysis

Marietta, GA | +1 678-315-2594 | samuelanduaem93@gmail.com

PROFESSIONAL SUMMARY

Computer Science graduate and current Master's student in Artificial Intelligence with experience in research, data analysis, machine-learning-related processes, and technology-driven operations. Completed an independent bachelor's thesis involving network simulation, experimentation, and performance analysis using NS-3. Professional experience includes analyzing large datasets and regulatory information at Amazon, payment and risk analysis at Square, and enterprise data and process management at Alcon. Interested in applying computational, analytical, and research skills to AI and machine learning projects.

EDUCATION

Kennesaw State University — Master of Science in Artificial Intelligence | Currently Pursuing

Warsaw Management University — Computer Engineering | 2021–2024

RESEARCH EXPERIENCE

Bachelor's Thesis — Implementing a High-Performance Wi-Fi Network on NS-3 Simulator | 2024

- Conducted an independent research project focused on designing and evaluating a high-performance Wi-Fi network using the NS-3 network simulator.
- Developed and executed network simulation scripts in a Linux environment, configuring nodes, wireless devices, protocols, and network parameters.
- Performed experiments analyzing network throughput, SINR, SNR, channel width, node distance, mobility, and packet statistics.
- Investigated dynamic and soft-computing approaches to network scheduling, including research involving artificial neural networks for Wi-Fi optimization.
- Applied research, experimentation, and analytical problem-solving to evaluate network performance and optimization strategies.

PROFESSIONAL EXPERIENCE

Alcon — Technical Service Administrator | 2023–2026

- Analyze operational and customer data across enterprise systems including SAP, ServiceMax, and CRM.
- Analyze service agreements, work orders, and operational documents to identify relevant information and support business decisions.
- Perform data validation, quality checks, and audits to maintain data integrity.
- Support cross-functional process-improvement initiatives and identify opportunities to improve workflows.
- Work with technology-driven processes involving billing, service operations, logistics, and customer data.

Amazon — Senior Compliance Analyst | 2022–2023

- Analyzed large volumes of product and regulatory data to identify potential compliance risks.
- Worked with machine-learning-supported processes for product review, classification, restriction, and recall activities.
- Investigated patterns and inconsistencies within product information and compliance data.
- Conducted quality reviews and supported process improvements in a large-scale technology environment.
- Collaborated with cross-functional teams on data-driven compliance and operational projects.

Square — Payment Analyst | 2021–2022

- Analyzed payment transactions and account activity to identify potential risks and irregularities.
- Reviewed large volumes of transactional data and applied analytical reasoning to support risk decisions.
- Supported audits, reporting, and development of payment-control processes.
- Collaborated with cross-functional teams to improve operational controls.

TECHNICAL & RESEARCH SKILLS

AI & Data: Artificial Intelligence, Machine Learning Concepts, Data Analysis, Data Classification, Document Analysis, Data Interpretation

Programming & Tools: Python, SQL, Git/GitHub, AWS, Microsoft Azure, NS-3, Linux

Enterprise Technologies: SAP, ServiceMax, CRM

Research: Network Simulation, Experimental Design, Performance Analysis, Technical Research, Literature Review, Problem Solving
